

# Story Y02: Search function Projects.

I want to be able to find what projects are going on on what date.

Wireframes:

The wireframe shows a web page layout. At the top, there are two navigation buttons: 'Home' and 'Projects'. Below them is a section titled 'Project Overview'. This section contains a table with four rows, each labeled 'Project 1', 'Project 2', 'Project 3', and 'Project 4'. At the bottom of the 'Project Overview' section, there is a search form consisting of a 'Date Input' field and a 'Find' button.

Acceptance Criteria:

- From the Project Overview page I should be able to insert a date I want to search.
- After clicking the find button and thus submitting the form I should be taken to a different page where I can see the projects that fit the date I inserted.

Technical Criteria:

- When inserting a date that doesn't match any projects, I don't leave the page and my filled in information stays the same.
- The find button doesn't change any of the projects in the table itself.
